ghost404 is complaining in Ghost Town about his script not working. See if you can locate the script on the remote machine and read the flag.

Submit the flag as `deadface{flag_text}`.

i

Use the connection information from Hostbusters:
Let Me In

0/100 attempts

SUBMIT

1. I explored the directory until I found a file named 'hostbusters6.bin'.
2. Inside was the following string that I attempted to decode in cyberchef.
 - a. `.^T.../d..}]{w....=Z...V.T?y...$...3@..^W..@..^S....`^Yt^H^D^H^[.....z:~^Sew.^EX.X..?[..t.^W.O...<.O..^@...W^?.^K^C^J..p.^&|^Qm-.EO@^U..^A.^T.dk..1]}o.^Y-.2.G..^A..O.`^Z^T^Sp.^L..kM}.T.p...^].^Ep.....e.A..{.^K^DE.O,2p9d.v^G^A..J..Q^M...h.H^W.LT....z.r^P....Smtu....-n..t^Q...C.^Z3Z`
3. However, absolutely nothing came from my attempts to decode this at this time.
4. Changing gears, I tried using the 'ls -a' command in the same directory to discover a '.keys' directory.
5. Inside, I discovered two .pem files, a private and a public.

6. The
contained
key in

```
/home/mirveal/.keys $ ls -a
.          ..          private.pem  public.pem
/home/mirveal/.keys $ cd ..
/home/mirveal $ ls -a
.          ..          .keys      hostbusters6.bin
/home/mirveal $ cd .keys/
/home/mirveal/.keys $ ls -a
.          ..          private.pem  public.pem
/home/mirveal/.keys $
```

public
a public
public.pem

a. -----BEGIN PUBLIC KEY-----

```
MIIBIjANBgkqhkiG9w0BAQEFAAOCAQ8AMIIBCgKCAQEA0BF5Ak348utTrl1PidsB
7ip9mNwzALj0CkVWjtlCtB5mrGCRIQvx+TN0nAEoGeWZqzAbeJlfnJRgDJNF5Dye

```

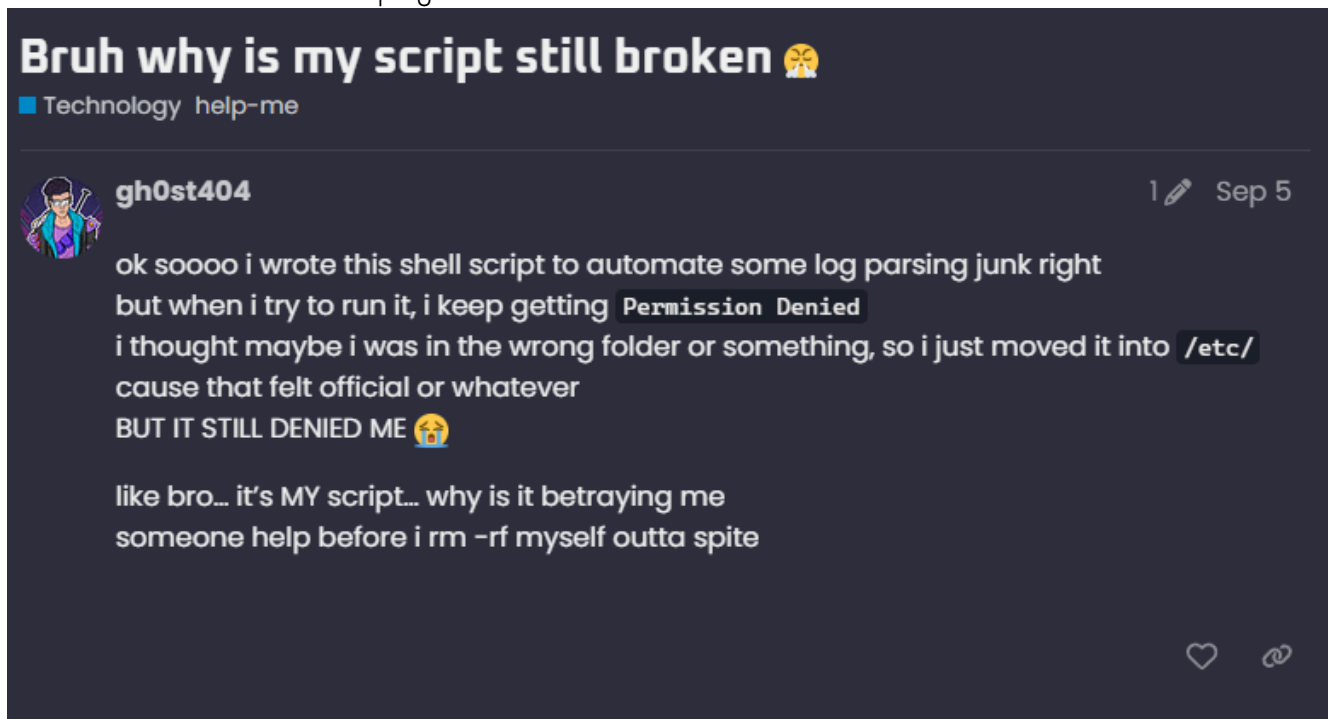

-----END PUBLIC KEY-----

7. Utilizing cyberchef's PEM to JWK decoder, the following was found:

a. {"kty":"RSA","n":"0BF5Ak348utTrl1PidsB7ip9mNwzALj0CkVWjtlCtB5mrGCRIQvx-TN0nAEoGeWZqzAbeJlfnJRgDJNF5Dyeb3VFTYmMdDD9UuOLtVtdZ7rR-sQJdJflfdCI-Nyh35JHa2joXgqmqTpKHD0Mmb8BDnM2DzR3wnnNUM_ei0_dTvYWY_MSp-iZLF8MWluA2-FEbrUHErFg27MD8Xn2hA3Exd6RR_x38ZNz-zUG5etxDqllGJNZQlrzRRCI1lbi8mEFhOAg9izt5BCIUx3fbvoEifcdi6ixi4wys0aw5EQMLwh1d-ajFdlwDAEXJygl1lnX5h0zQdWRsEaojYFDHi_8Q","e":"AQAB"}

8. However, nothing came from decoding this as well in this challenge.

9. After taking a break from this challenge for a while, I found the following post on the Ghost Town social media page

11. In the response, multiple members of Deadface reply saying that he needs to use '-su' to regain control of the file

12. Given the file path was now provided, I followed the listed route to find the file '[logclean.sh](#)'

```
-rw----- 1 gh0st404 gh0st404 552 Sep 17 02:04 logclean.sh
-rw-r--r-- 1 root root 20 Mar 2 2025 login.defs
```

13. I utilized the 'cat' command to read the file and found the flag hiding at the bottom.

```
/etc $ cat logclean.sh
```

Flag: deadface{hostbusters3_0547796725934bbd}

Found this little gem in the process of hunting for this flag. Second image was assumed to be needed in order to utilize it effectively.

```
/usr/local/bin $ ls -a
.
..
pen-console.py
/usr/local/bin $ pen-console.py
YO welcome to deephax's red team console 🍷 type 'help' for commands or whatever. let's HAX! 🍷
(deephax)> help

Documented commands (type help <topic>):
=====
base64  decrypt  encrypt  forensics  hash  help  quit  recon

(deephax)> recon
yo i need an IP ☹️
(deephax)> q
*** Unknown syntax: q
(deephax)> help commands
*** No help on commands
(deephax)> quit
PEACE OUT - deephax out 🍷
```

```
