## Stick to the Script

### 40

WEB

@syyntax

Created By: @syyntax

NVU thought they were being clever by obfuscating some of their code, but DEADFACE was able to figure it out. Despite this, NVU hasn't remediated the issue; we're pretty sure the secret they tried to hide in their code is still there - easily readable to anyone who sees it. Find the flag that is obfuscated in the web app's code.

Submit the flag as `deadface(flag text)`.

<http://env01.deadface.io:8080>

1. While searching for the 'Hidden Paths' challenge flag, I accidentally found two flags. One is the Console Chaos flag listed above. The other is this obfuscated javascript that was further up on the page from the Console Chaos flag

```
// ZGVhZGZhY2V7ajR2NHNjcjFwdF9jNG5faDFkM19zM2NyM3RzfQ==
```

2. Recognizing this as base64, I went to Cyberchef and converted it from base64 to get the flag.

From Base64

Alphabet  
A-Za-z0-9+/=

☒ Remove non-alphabet chars

ZGVhZGZhY2V7ajR2NHNjcjFwdF9jNG5faDFkM19zM2NyM3RzfQ==

Output

deadface{j4v4script\_c4n\_h1d3\_s3cr3ts}

Flag: `deadface(j4v4script_c4n_h1d3_s3cr3ts)`
